Abstract

Actephila forsteri B.J.Conn is a new name for *A. longipedicellata* P.I.Forst., a latter homonym of *A. longipedicellata* (Merr.) Croizat.

Actephila longipedicellata P.I.Forst. (Euphorbiaceae/Phyllanthaceae) was described as a new shrubby species occurring in northern Australia (Forster 2005). The author was unaware that the same specific epithet had already been used in 1942 for the new specific combination *A. longipedicellata* (Merr.) Croizat (Croizat 1942) based on the basionym *Cleistanthus longipedicellatus* Merr. (Merrill 1924). The latter species occurs in northern Vietnam ('W. Tonkin', Croizat 1942, p. 29). Therefore, the name *A. longipedicellata* P.I.Forst. is a latter homonym and hence, illegitimate (Article 53.1, ICN 2012). The new name *A. forsteri* B.J.Conn is here provided for these Australian plants, with the specific epithet acknowledging the extensive contribution that Paul I. Forster (BRI) has made to our understanding of the flora of Australia, and specifically this genus.

Actephila forsteri B.J.Conn, nom. nov.

Type: Queensland: Cook: Garraway Creek rockpiles, 16 Apr 1988, *P.I. Forster 4227* & *D.J. Liddle* (holo: BRI; iso DNA, KEP, SAN, SAR)

Replaced name: *Actephila longipedicellata* P.I.Forst. *Austrobaileya* 7: 78–80, Fig. 7 (2005), non (Merr.) Croizat, *Journal of the Arnold Arboretum* 23: 29 (1942).

Informal Phrase Name: *Actephila* sp. (Claudies River BH 7803) (Hyland et al. 2003; Hyland et al. 1999)

Acknowledgments

Bob Coveny and Trevor C. Wilson (both NSW) kindly provided library assistance.
